### SANTA FE'S NEEDS.

"The By-ander" in the New Mexican says this paper referred to Santa Fe in a sarcastic manner. Not so; that was intensive advertising. No one can deny the many attractions of Santa Fe. The community and the surrounding country has them in many and varied forms and their interest to every one in this broad country of ours cannot be measured, when the romantic history of the North American continent is considered. For intensely interesting reading nothing can surpass the history of this state by Twissell, Reid and Prince. The residents of Santa Fe—some of them, at least—deserve unstinted praise and thanks for the marvelous record of past events now preserved in the archeology and museum scene. Days may be spent in these rooms with untold profit and enlightenment. Every resident of New Mexico knows that a tourist cannot afford to pass up Santa Fe when traveling through the state. And every one knows, who has visited Santa Fe, that in some things the city can improve and with a little effort cannot only catch these tourists "going", but "get 'em coming back." The hotel proposition is going to solve itself in a short time. The big thing for Santa Fe as an outsider calmly looks at it, is to take politics out of the city government. Put a business man at the head of the city affairs, with a council of business men, and tell them to put the historic old town to the front. Santa Fe should have its streets put in better condition and a sewerage system built now. It is the groundwork of civic growth to which the other beautiful things will be added when this foundation for further improvement is built. With everybody at heart desiring to make Santa Fe attractive because of its historic interest, as well as because of its prominence as the state capital, why should politics enter into the proposition and defeat what all the citizens, not only of Santa Fe, but of the entire state, desire to see brought about? A few of the progressive people cannot accomplish what it takes a united community to effect. It being our capital city, we of the state have an interest in its appearance and feel that we have the right to speak our piece.

Our representative in Congress, Harvey E. Ferguson, says that T. R. is a democrat but won't admit it. Neither will the democrats.

Don't blow in on riotous living the money you're saving on coal this winter. Remember the ice man is still with us.

The cash register trust will now have to make change for a \$1,000,000 bill.

Forty Grains of Barley

The story of the education of 40 grains of barley at the Wisconsin agricultural college, under the direction of Prof. R. A. Moore, reads like a story of Aladdin and his won derful lamp, says the Sioux City Tribune.

It was so long ago as 1899 that the education began and now the posterity of those 40 grains is sufficient to furnish seed to every barley sower in the United States. It is called Wisconsin Polished Barley, and it has increased the yield of the Wisconsin barley field by more than \$12,000,000 yearly value.

The curriculum through which this barley passed was one of careful selection and constant breeding as to strength, quality and fertility.

A dozen years ago barley was barley. It might have two, four or six rows of grain to a head; it was sometimes bearded and sometimes beardless; some had hulls and some didn't; some stalks got ripe at one time, others at another; some germinated on the matting floor in two days, some in four, some in six.

The habits of barley have been standardized, so that it ripens at the same time, germinates in the same period, pearls uniformly, has six rows to the head, and is sturdy and heavy bearing.

Good barley from this educated variety has sold as high as \$1.25 per bushel with an unlimited demand. One order of 20,000 bushels has gone to Japan, a strong proof that it is a good article.

Good soil, intelligent cultivation and educated seed are the three factors of modern farming and the profits that roll in from the practice and use of this trinity of wisdom tell for a happier, saner, richer or country life in America.

Irrigation by Pumping.

Irrigation by pumping is growing all over the country. We have now hundreds of pumping plants, where we had none a few years ago. It has its advantages and its disadvantages. It costs more than gravity irrigation, but it is available any time and is a paying proposition in many of our farms. India irrigates over three million acres from wells, and the time will come when America will surpass this. A pumping supply of about 450 gallons a minute will be ample to irrigate six acres. One thing to remember is when water is forced through a pipe the faster it travels, the greater loss in friction. The loss is equivalent to increasing the pumping head.

It is better to use large instead of small pipes. It also behooves to have a few turns or elbows as possible and it is simply a question that must be decided for each individual plant as to what size pipe will be the most economical. The larger the pipe the more it costs, and yet with large pipe the engine may be smaller and less fuel required to pump the required amount of water.—Bulletin.

Community Advertising.

Mr. Roy Bedichek, secretary of the Deming Chamber of Commerce, made a trip over to Albuquerque recently and while over there outlined the method of the advertising campaign which Deming has adopted with such signal success. The closing words of his talk were as follows:

"The scientific advertiser knows what to do and where to do it. He knows his line and he is at it all the time. It is now three years since Deming commenced casting her hooks into the public prints, and you don't hear any complaint of hard times in Deming, nor haven't for the past three years."

Mr. Bedichek divided Deming's advertising into three kinds: general development news sent out to such publications as care to use it; paid advertising in farm journals of the middle west, and displays at land shows and fairs.

President Taft is a hopeless reactionary. He has absolutely refused to give our country a war.

### SUBIRRIGATION.

Reports from several sections of New Mexico state that experiments are being made in sub-irrigation by diking, and from other portions of the arid west satisfactory reports have already been made of the use of diking to irrigate. In a country where land is cheap and water dear any method which produces more crop with less water should be recommended with favor.

It has been stated by several experimenters that one gallon of water used in sub-irrigation will produce the same results that seven gallons would used in the usual wasteful method of flood or even furrow irrigation. Making a somewhat different but allowable deduction a little windmill outfit which can pump 20 gallons per minute will produce the same result by the sub-irrigation method, that a power outfit pumping 140 gallons per minute would and used in the ordinary wasteful way.

There are several local experiments being made in sub-irrigation and the success of them will be watched with interest. If the system does all that the most enthusiastic expect it will make several hundred s of grass grow where there was but one before.

A Connecticut man has invented a "gasograph" which produces on it palates the sensation of eating and drinking without the actual presence of food or drink. The board ing-house keepers beat him to it years ago.

Our representative in Congress, Harvey E. Ferguson, says that T. R. is a democrat but won't admit it. Neither will the democrats.

Don't blow in on riotous living the money you're saving on coal this winter. Remember the ice man is still with us.

### SINGING SCHOOL

OF OTHER DAYS

Program to be Given at the High School Auditorium Friday Evening, Feb. 28

### Old Fashioned Singing School

Part I  
The Professor puts the boys and girls through a drill to learn the notes. Some are not apt, and some are more given to fun than learning music. The pastor sues a plan to get an organ for the local church. All agreed except the "high soprano," who does not need one to assist her talents, etc., etc.

### Concert of Old Favorite Songs

PART II

1. Chorus, Auld Acquaintance.
2. Chorus, Long, Long Ago.
3. Solo and Chorus, Jingle, Jingle Bells.—John Tweed.
4. Solo, Last Night.—Mrs. Sammons. (guitar accompaniment).
5. Mixed Quartette, Medley of Southern Airs.—Mrs. Tipton, Miss Dinns, Messrs. Tipton and McCalmont.
6. Solo and Chorus, Just Before the Battle, Mother.—A. G. Carlson.
7. Mixed Quartette, Church in the Wildwood.—Mrs. Armstrong, Miss Alaman, Messrs. Armstrong and Morgan.
8. Solo, In the Gloaming.—Miss Minns.
9. Mixed Quartet, Come Where the Lilies Bloom.—Mrs. Sammons, Miss Minns, Messrs. Armstrong and Morgan.
10. Male Quartet, Rocked in the Cradle of the Deep.—Messrs. Schultz, DeCalmont, Armstrong and Morgan.
11. Duet, Good Night.—Mrs. Sammons, Mrs. Robinson.

### Finish This Story

WORKMAN in an IHC wagon factory was explaining the various stages of wagon construction to an interested visitor. He picked up two pieces of long leaf yellow pine, and asked the visitor to notice the difference in the weight of the two pieces. The lighter piece, he explained, was kiln-dried. The heavier piece was air-dried. It had retained the resinous sap which adds strength and toughness, while in the kiln-dried piece of lumber this sap had been drawn out by the too rapid application of heat.

### Every Stick of Lumber Used in IHC Wagons Is Carefully Selected, Air-Dried Stock

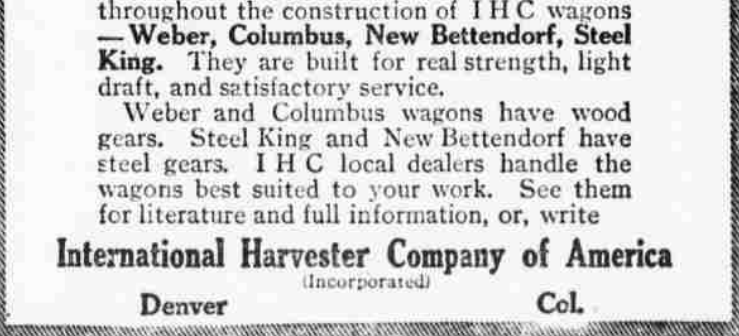

Here was something to think about. The visitor asked for a test as to the relative strength of the two pieces of wood. The air-dried piece held up under nearly double the weight under which the kiln-dried piece of lumber broke.

To the eye there was no difference between these two pieces of lumber, but when put to the test there was a vast difference. So it is throughout the construction of IHC wagons—Weber, Columbus, New Bettendorf, Steel King. They are built for real strength, light draft, and satisfactory service.

Weber and Columbus wagons have wood gears. Steel King and New Bettendorf have steel gears. IHC local dealers handle the wagons best suited to your work. See them for literature and full information, or, write
